

Abstract

A method and a device for synchronizing data between a first electronic device and at least one another electronic device, said devices being capable of communication connection with each other. The method comprises storing a data item for a first time into the memory of the first electronic device, associating said stored data item to an identifier, said identifier being associable to at least one data item stored into the memory of the first electronic device, selecting at least one identifier for synchronization, and synchronizing said data items between said first electronic device and at least one another electronic device on the basis of said at least one selected identifier.
